INTRODUCTION.

DOCUMENT OBJECTIVES AND READER ASSUMPTIONS

Volume II, Project Study Forms and Documentation of Transfer to Computerized Data Items in Master File, provides researchers with detailed documentation for how data were collected, coded and stored on the data base. Volume II will help investigator's decide: if data were collected in a suitable way for addressing particular research questions; if revision of forms affected the collection of specific data items; if data were coded on master, variable or work files, or are available only on microfilm. The reader is assumed to be the principal investigator for a project in which data from the data base will be used.

DOCUMENT STRUCTURE

Because of its size, this volume is divided into ten separate parts, each containing material on a group of forms related by subject. Each part groups together similar study forms. Generally, a part covers a single time period. The parts do not correspond exactly to the hierarchical classification structure described in Volume I. The parts of Volume II include:

- A. Prenatal Record and Medical History
- B. Labor and Delivery
- C. Pathological Exams and Autopsies
- D. Family and Socioeconomic History
- E. Neonatal Exams and Observations
- F. Pediatric and Neurological Exams, Four Months - One Year
- G. Pediatric Neurological Exams, Seven Years
- H. Psychological Exams, Eight Months
- I. Psychological Exams, Four Years and Seven Years
- J. Speech, Language and Hearing Exams, Three Years and Eight Years (Final)

This part of Volume II contains Part H: Psychological Exams, Eight Months and includes forms PS-1, PS-2, PS-3, PS-4 and PS-5.

To allow easy access to the data as they appear on the master file, all documentation for each form or form grouping representing a card series on the master file is identified by form number appearing at the bottom of each page. Forms are arranged in what may appear to be illogical numerical order in some cases, but the arrangement presented here ties forms and their revisions together and allows an investigator to trace an item through all revision cycles. Thus, in Part A of Volume II, QB-42 follows QB-9 and CS-10 appears next to QB-44 and QB-45. (For an explanation of how the master file was organized to result in this ordering, see the next section of the introduction.)

All material related to a form is organized as a single unit within each part of Volume II. The material included for each form is given below in the order it appears:

- Descriptive Summary of Form. Includes purpose of form, history of use, revisions and location of records stored on Master File. A table is provided for each form (except those on microfilm only) showing the number of records available for each revision.
- Data Items Relating Form. A list of all data items in computer files originating from form. List ordered by data item identification with reference to item number on form.
- Form. Copy of last revision of form.
- Form Item Numbers Linked to Data Items. A list organized by form item numbers of all computerized data items originating from the form.
- Definition of Codes. Coding instructions detailing the codes assigned to each computerized data item from the form.
- Master File Card Page. Illustrates transfer of data on form to Master File card.
- Instructions for Completing Form. The instructions used by study personnel to complete the form for each case.
- Earlier Forms or Methods. Copies of earlier versions of forms or journals that were used during the study.

MASTER FILE ORGANIZATION AND NUMBER OF FORMS

Some understanding of how the master file was organized should aid investigators who want to trace the entry of data into computerized study files. The numbering system used both on forms and cards provides information on how data may be retrieved from the master file.

FORMS

The first forms used in the study were the 60 forms; as a consequence, this group of forms underwent the most revision. At first glance, it appears that forms disappear from the file and reappear in strange or bewildering places. In actuality, revisions were made according to a specific method.

Two types of revisions and subsequent records appear in the master file, both of which appear in the 60 series. In the first type of revision, radical changes in the concept of a form created a need for new coding in the computer file. Form 03-9, for example, was replaced by forms 03-40 (an optional form retained by the institution), 03-41, and 03-43 in April 1962. Data for earlier patients were recorded on 03-9 and entered on cards 1309, 2309, 3309 and 4309 of the master file; after April 1962, data was recorded on 03-40 and 03-43 and were entered on cards 0340, 1040 and 2340 of the master file.

In the second type of revision, the Collaborative Perinatal Task Force considered revisions important enough to warrant the distinction of a new form number, but considered the data for both forms to be similar enough to allow combining of data from both the old and new forms on the same card series. An example of this type of revision is form 03-35, replaced by 03-57 in April 1962. Records for both 03-35 and 03-57 are entered on cards 0357, 1357, 2357, 3357, 4357, and 5357 in the master file.

In assigning numbers to forms and their revisions, designers of the study followed a plan: prenatal records, history, and summaries of the prenatal period received numbers 1 through 15; when revised, these forms were assigned numbers in the forties. Labor and hospital records appeared on the 30 series of forms. When these forms were revised, they were assigned numbers in the fifties. Some 61 data in the master file were abstracted by NACDE staff members from forms filled out at the hospital. Cards derived from this procedure were designated as coding from forms 03H-09, 51, and 51 (which were actually ABSTRACT SHEETS). Autopsy protocol and laboratory exams of the placenta were recorded on forms PATH-1, PATH-2 and PATH-3.

Forms for recording family, health history and genetic information during pregnancy also received a fair amount of revision. Early records appear on forms FHH-1,2,3 and 4. With revisions in April 1963, form SE-1 replaces part of FHH-1 and FHH-3; FHH-2, FHH-4 and parts of FHH-1 and FHH-3 were replaced by

forms GEH-5 through GEH-8 in May 1961. Form FHH-9, initiated in November 1965 for collection of socioeconomic data at time the child was seven years of age, was not replaced or revised.

The PED series of forms underwent little revision. Records for newborn babies appeared in PED-1 through PED-8; records for children up to age one and interval records were placed on PED-10 through PED-29. Seven year records were included in the series numbered PED-74 and up. Only one pediatrics form was radically revised: PED-7 was replaced by PED-8 in March 1963.

No replacements occur in the PS series, where results of psychological and speech, language and hearing tests were recorded. The PS forms are divided into distinct groups based on time of testing and subject of testing. Psychological testing occurred at 8 months, 4 years and 7 years; speech, language and hearing exams were administered at ages 3 and 8. Only the 8 month psychological examination underwent substantial revisions.

Master File Card Number and NIMES Case Number Rationale

Computer cards for each NCPP study form are numbered to reflect their origin and possible revisions. Card numbers are assigned to identify the type of data (subject), the presence of multiple cards in a series, NCPP study form and form revisions. The first five digits of each card on the master file are the card number. The study forms and card numbers are given in figure 1.

The first fourteen columns of each master file computer card contain the master file card number and the NIMES case number. Table 1 identifies the function of each of these columns.

Column 1 identifies multiple cards in a series. It contains a zero for cards unique to a particular form (that is, no other cards are present), for example OB-3, or for cards where repetitive data are contained. Cards for OB-2 are an example of this second type; no new categories of information are included on successive cards, but previous births in excess of four must be recorded on an add-on card. For card series where data entered are unique to a card and more than one card is required to complete the series, a "1" is used to designate the first card, for example OB-5, OB-57, PATH-2 and PED-14 are exceptions to these rules.

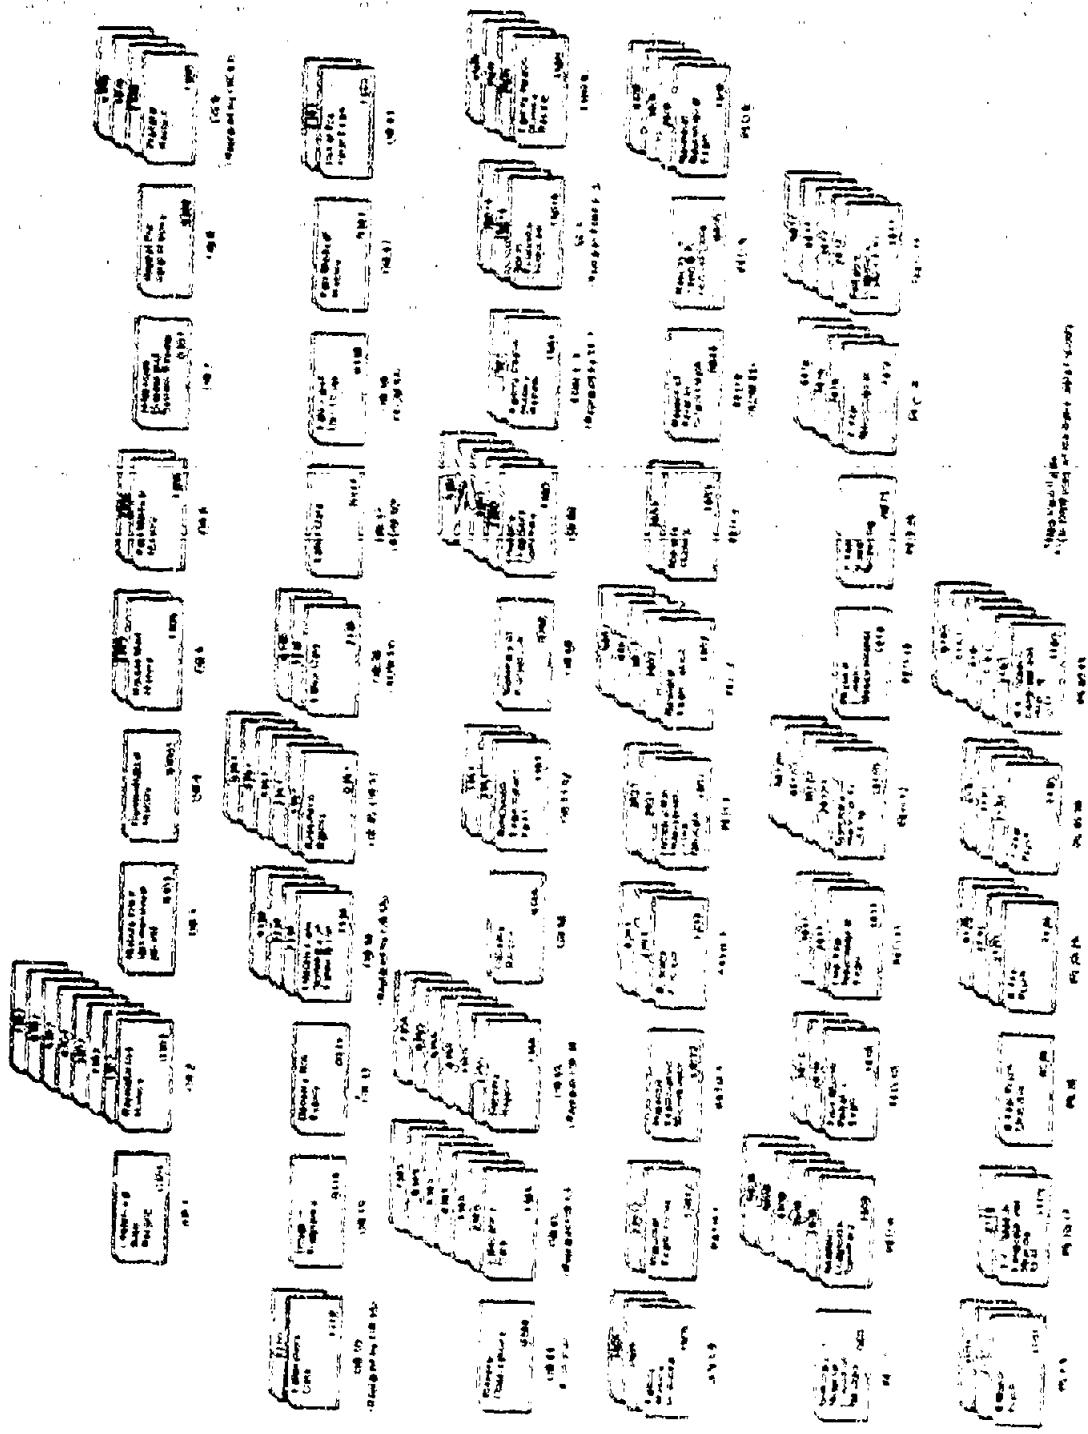

FIGURE 1. Cards on the Master Data File

TABLE 1. Derivation of Master File Card Number
and NINCDS Case Number.

<u>Contents</u>	<u>Columns</u>
Master File Card Number	
card identifier	1
general subject matter	2
form number	3-4
revision code	5
NINCDS Case Number	
collaborating institution	6-7
type of patient selection	8
gravida identification number	9-12
order of the pregnancy	13
identifies child or gravida	14

The second digit on the card reveals the general subject matter covered by data on the card. All cards containing information pertaining to obstetrics, for example, are designated by a "3" in column 2; family histories are designated by a "5"; pathology with a "2"; pediatrics, with a "4"; and psychological testing with a "1".

Columns three and four reveal the form number. In the case of forms where old and new forms having different numbers are included together, the number of the latest form appears on the master file. This rule does not apply to data abstracted from several forms by NINCDS staff (ABU forms).

Column 5 of the card contains a revision code indicating which form or combination of forms was used in arriving at data on a particular card. A typical card will have one to three revision codes, with a zero indicating the first version of a form and "1", "2", and "3" indicating later revisions. As a rule, revision codes used on cards differ from card to card; investigators should check the definition of codes provided in Volume II to determine the meaning of revision codes used.

Each woman and child studied in the project received a unique case number (NINCDS case number) composed of nine digits, recorded in columns 6 through 14 of all master file cards. The case number identified the institution, the mother and the child. The first two digits represented the collaborating institution (see Table 2). The third digit indicated the type of patient

selection. A "1" was used for patients selected for the central core study; a "6" indicated that a patient had been transferred from one institution to another, and a "7" indicated that the patient was part of a special study undertaken by the collaborating institution. The fourth through seventh digits were used to identify the gravida, while the eighth digit identified the order of the pregnancy of a given gravida in the project. The ninth digit was used to identify the gravida or child of the pregnancy; "9" indicated the gravida, "0" indicated the child of a single birth, "1" indicated the first child of a multiple birth, "2" indicated the second child of a multiple birth, etc.

TABLE 2. Collaborating Institutions and Their State Number
(Columns 10 and 11 of all master file records)

Data Item Identification and Naming

The ACPP data base contains over 6700 different data items and blank filler locations on computer files. We have assigned each of these a unique identification and a terse, stylized name. Because names were chosen to facilitate use of this guide, they do not duplicate names used by NMDD during the active phase of the project. Users should consult appropriate documentation before using data items from the raster, variable or work files (Volumes II, III and IV).

The data item identifiers consist of 11 characters. At the far left are four unique numbers that were assigned sequentially. The next character is always a period and is followed by up to six characters. For data items on the raster file, these characters describe the data collection form from which a data item was derived; for data items on the variable (NM) or work (Wk) files, these characters indicate the appropriate file. If the right side is less than six characters, periods are inserted as shown in these examples:

650...03-34	an item from 03-34; on the raster file
3650.PATH-3	an item from PATH-3; on the raster file
5223....NRF	an item on the variable file
6340...W-10	an item on work file 10. Capture of entrances

We assigned the numbers sequentially as they appear in Volume I. For the raster file, we followed the order in which the cards would be found within an NMDD case. All card columns are accounted for by one of our data item identifications. For the variable and work files, the numbers were assigned in the order that data items appear within a case.

We categorized each data item according to the person to whom the data refer, by the time of measurement and/or the time to which the item applies and by general type or subject area (Table 3). Then we assigned names to the data items using the following guidelines:

- The name and the three associated categories had to stand alone - they must describe the data item out of context.
- The first word in the data item name had to be an important or key word when all names were listed alphabetically, as in Volumes II and III. Thus "cry, abnormal" was used rather than "abnormal cry" because a

researcher is more likely to look for this item under "C" than under "A" in an alphabetic list.

- Secondary key words were preceded with a semicolon to facilitate preparation of the permuted index. For example, "abruptio; placenta" will be found under both the "A" and "P" portion of Volume VI.
- Qualifying words are delimited by commas and will not appear as keywords in Volume VI. Thus "abruptio; placenta, degree" will not be found in the "PP" section.
- If medical terminology or usage has changed since the study was conducted, modern terms may be included and will be enclosed in brackets. Thus "mononucleosis; (Coxon's syndrome?)" will appear under both the "M" and "O" portions of Volume VI.
- If measurement units are associated with a data item name, they are enclosed in parentheses and placed at the end of the name as in "Birthdate (yr.)."
- The categories (person, time and subject) are appended to the right of the data item name.

Definitions for each category used in naming data items are given in Table 4 at the end of this introduction. Additional information is found in Chapter 4 of Volume I.

Data item names thus assigned are terse and highly stylized; as we have already indicated, they are not the names used by NHD during the active phase of the project. Our aim was to develop standardized names that would stand alone. These names are intended to facilitate a user's search for data items potentially useful in a research project. Before an item is used, a researcher should consult its complete description. For a data item from the master files, e.g., E50..02-34, the data item should be traced to the appropriate study form, e.g., OP-34, located in Volume II. A variable file data item, e.g., 6283....ME, is traced to Volume III, where it is defined and its original source given. A data item from a work file is traced to Volume IV for its description.

Some data items contained in the indexes may include the notation "YD NOT USE." These items are either inaccurate or an alternative data item is available that gives better information. Users will find more appropriate data items by consulting one of the indexes to the data items (Volumes, I, VI and VII).

Tables of Data Items: Column Headings

For each form, two sets of computer generated pages list all data items in either the master, variable or work files derived from this form. These lists enable a user to track form items to computerized data items listed in other volumes of the user's guide and vice versa. The computer listings have the following information:

<u>Column Headings</u>	<u>Description</u>
DATA ITEM #	A unique identifier for this data item. See Data Item Identification and Listing above for details.
ITEM ON FORM	An identifier used on the NFPP study form to identify the question or group of questions which was used to generate this data item.
CARD NUM	Identifies the master file card on which this data item is located. See Master file card number and NINIS file master card numbers above for a description of card number.
FROM	Beginning card column for this data item.
TO	Ending card column for this data item.
DATA ITEM NAME	Text stylized name for this data item. See Data Item Identification and Listing above for details.

ASSOCIATED DOCUMENTS

By examining the tables provided for each, investigators will be able to determine which computer files contain data of interest. For data contained in the variable file, see Volume III of this guide; for data contained in work files, see Volume IV.

TABLE 3. Abbreviations for Person, Time and Subject Categories

<u>Person</u>	<u>Time</u>	<u>Subject</u>
Mother	General	Anthropometric
Father	General	Anesthesia
Child	General	Child Development
Brother	General	Chemical Use
Sister	General	Current Pregnancy
Half-sibling	General	Environment, Circum-
Family	General	stances
Offspring	General	Genetics
Mother	First-trimester	Hospitalizations
Father	Second-trimester	Language
Child	Third-trimester	Lungage
Brother	One year	Mathematics
Sister	One year	Phys. Ed. Test.
Half-sibling	One year	Medications
Family	One year	Neurological Exam
Offspring	Eight years	Observations
Mother	Eight years	Pathology
Father	Eight years	Physical Exam
Child	Eight years	Probable
Brother	Eight years	Psych. Exam
Sister	Eight years	Perinatal history
Half-sibling	Eight years	Serialology
Family	Eight years	Sociocess. inc.
Offspring	Eight years	Speech
Mother	Eight years	Vision
Father	Eight years	Social History
Child	Eight years	X-ray
Brother	Eight years	Summary
Sister	Eight years	Syn. History
Half-sibling	Eight years	Spectral Studies
Family	Eight years	Therapeutic hist.
Offspring	Eight years	Uln. Exam

**TABLE 4. Definition of Person, Time
and Subject Categories**

PERSON	DEFINITION
Mother	Study registrant bearing the "study pregnancy"; biologic mother of the "study child"; gravida.
Father	Biologic father of the study child or study pregnancy; in the case of socioeconomic data, this category may indicate either the "father of baby" (not necessarily husband of the mother), or the "husband" (not necessarily related biologically to the study child).
Placenta	The organ of metabolic and gaseous interchange between the fetus and mother; also included in this category are gross and microscopic pathologic data from examination of the umbilical cord.
Fetus	Conceptus; the product of conception including the embryonic stage, i.e., from conception to the moment of birth.
Child	Product of the study pregnancy from the moment of birth onward; study child.
"Surrogate"	Person or persons substituting for the mother of a study child, e.g., adoptive parents, foster parents or guardian.
Family	Person or persons biologically related to the mother or father of the study child.
Sibship	Child or children having one or both of the same biologic parents as the study child; siblings; half siblings; full siblings.

**TABLE 4. Definition of Person, Time
and Subject Categories (Cont.)**

<u>TIME</u>	<u>DEFINITION</u>
General	Data with no pertinent time period or data pertaining to more than one time period.
Preconception	Data pertaining to the period prior to conception of the study pregnancy.
Registration	Data collected at the time of study mother's registration in the study.
Prenatal	Data pertaining to the period from conception of the study pregnancy to delivery of the study child.
Admission	Data collected at the time of study mother's admission to the hospital for delivery of the study child.
Intrapartum	Data pertaining to the period from admission for delivery or onset of labor to delivery of the study child.
Delivery	Data pertaining to the time period during which delivery of the study child occurred.
Post Partum	Data (pertaining to the study mother) collected during the period immediately following birth of the study child.
Neonatal	Data pertaining to the study child during the period from birth to one month of age; the majority of these data were collected prior to or at the time a study child was discharged from the hospital.
Four Month	Data collected at the time of the four month examination of the study child.
Eight Month	Data collected at the time of the eight month examination of the study child.
One Year	Data collected at the time of the one year examination of the study child.
Three Year	Data collected at the time of the three year examination of the study child.
Four Year	Data collected at the time of the four year examination of the study child.
Seven Year	Data collected at the time of the seven year examination of the study child.
Eight Year	Data collected at the time of the eight year examination of the study child.

**TABLE 4. Definition of Person, Time
and Subject Categories (Cont.)**

SUBJECT	DEFINITION
Administrative	Data pertaining to the administrative aspects of the study.
Anesthesia	Data on medications and procedures used to obtain anesthesia.
Clin. Impression	Impression of abnormality or dysfunction gained by an examiner following evaluation of clinical signs and symptoms and including a subjective component.
Clinical Lab	Data obtained from laboratory examination of clinical specimens.
Current Pregnancy	Personal data and medically relevant information pertaining to the study pregnancy for which the mother is enrolled.
Environ. Exposure	Data on exposure to occupational or other environmental entities or hazards.
Events	Data related to a specific event, occurrence or incidence.
Hearing	Data obtained from examination and testing of hearing function.
Hospitalizations	Data on specific hospital admissions or the number of hospitalizations.
Language	Data obtained from examination and testing of language function.
Linkage	Data on the genetic relationships of family members to the study mother, father or child.
Malformations	Data on the conditions in which failure of normal development has resulted in abnormal physical traits existing at the time of birth.
Diag. & Cond.	Data on specific diagnoses or conditions obtained from past medical history or examination during the study.
Med. History	Data obtained from the study participant or medical records relevant to past or current medical diagnoses or conditions.
Medications	Data on drugs or medications used.
Neurological Exam	Data obtained from observation and physical examination of the central nervous system.
Observations	Data obtained from observations not categorized elsewhere.
Pathology	Data obtained from clinical and anatomical pathological examination.
Physical Exam	Data obtained from physical examination of the study participant.
Procedure	Data relating to specific procedures performed on the study participant prior to or during the period of enrollment in the study.
Psych. Exam	Data obtained from the psychological examinations and observations.

**TABLE 4. Definition of Person, Time
and Subject Categories. (Cont.)**

SUBJECT	DEFINITION
Reproductive Hist.	Data pertaining to the outcome of pregnancies prior to and or during the period of enrollment in the study.
Serology	Data obtained from the laboratory examination of serum by specific immunologic methods.
Socioecon. Info	Data related to the social and economic characteristics and environment of the study participant.
Speech	Data obtained from examination and observation of speech function.
Vision	Data obtained from examination of the eyes.
Work History	Data pertaining to occupation and employment prior to and during the period of enrollment in the study.
X-Ray	Data on diagnostic x-rays and diagnostic or therapeutic radiological procedures.
Summary	Data presented as a summary of data collected and recorded elsewhere.
Cyn. History	Medical history specifically related to the female genital tract, reproductive physiology and endocrinology.
Special Studies	Data pertaining to participation in other special organized studies conducted during the period of enrollment in the study.
Fam/Genetic Hist.	Data on the medical histories of family members genetically related to the study child.
SLH Exam	Data obtained from the speech, language and hearing examinations not specifically or exclusively related to one of these areas.

CONTENTS

PS-1-5	Eight Month Psychological Exams	II.II.1
PS-1, PS-2	CCLR Research Form of Bayley Scales of Mental Development	
PS-3	Infant Behavior Profile	
PS-4	Additional Observations	
PS-5	Maternal Behavior in Testing Situation	

PS-1 Through PS-5

PS-1 and PS-2 COLR Research Form of Bayley Scales of Mental Development

PS-3 Infant Behavior Profile

PS-4 Additional Observations

PS-5 Maternal Behavior in Testing Situation

The purpose of the Eight-Month Psychological Examination was to assess infant psychomotor development. The infant's responses to the COLR research version of the Bayley Scales of Mental and Motor Development were recorded on PS-1 and PS-2, respectively. The qualitative aspect of the performance consisting of examiner ratings of behavior observed during testing was recorded on form PS-3, Infant Behavior Profile. Supplementary information on physical development, hearing acuity and behavior abnormalities was recorded on PS-4, Additional Observations. Examiner ratings of maternal interaction with the infant were recorded on form PS-5. All five forms were implemented in February 1960; they were revised in July 1960 and again in January 1961. Revision resulted in some rearrangement of items on the Mental and Motor Scales (PS-1 and PS-2) and the addition of items on the Infant Behavior Profile (PS-3), Additional Observations (PS-4) and Maternal Behavior in Testing Situations (PS-5). Data from forms PS-1 thru PS-5 were punched on cards 1101, 2101 and 3101 in the master file (Table PS-1.1).

44	2779...PS-1 1101	45	45	45	45	Hayley scales; mental development, carries ring to mouth
45	2780...PS-1 1101	46	46	46	46	Hayley scales; mental development, manipulates table edge slightly
46	2781...PS-1 1101	47	47	47	47	Hayley scales; mental development, inspects own hands
47	2782...PS-1 1101	48	48	48	48	Hayley scales; mental development, closes on handling ring
48	2783...PS-1 1101	49	49	49	49	Hayley scales; mental development, turns need in sound of bell
49	2784...PS-1 1101	50	50	50	50	Hayley scales; mental development, turns need to sound of bell
50	2785...PS-1 1101	51	51	51	51	Hayley scales; mental development, reaches for cube
51	2786...PS-1 1101	52	52	52	52	Hayley scales; mental development, active table manipulation
52	2787...PS-1 1101	53	53	53	53	Hayley scales; mental development, regards mirror
53	2788...PS-1 1101	54	54	54	54	Hayley scales; mental development, approaches mirror range
54	2789...PS-1 1101	55	55	55	55	Hayley scales; mental development, picks up cube
55	2790...PS-1 1101	56	56	56	56	Hayley scales; mental development, exploitative paper play
56	2791...PS-1 1101	57	57	57	57	Hayley scales; mental development, retains 2 cubes
57	2792...PS-1 1101	58	58	58	58	Hayley scales; mental development, discriminates strangers
58	2793...PS-1 1101	59	59	59	59	Hayley scales; mental development, vocalizes attitudes
59	2794...PS-1 1101	60	60	60	60	Hayley scales; mental development, removes rattle from crib or
60						
61	2795...PS-1 1101	61	61	61	61	Hayley scales; mental development, reaches persistently
62	2796...PS-1 1101	62	62	62	62	Hayley scales; mental development, turns head after dropped object
63	2797...PS-1 1101	63	63	63	63	Hayley scales; mental development, lifts cup
64	2798...PS-1 1101	64	64	64	64	Hayley scales; mental development, reaches for 2nd cube
65	2799...PS-1 1101	65	65	65	65	Hayley scales; mental development, enjoys frolic play
66	2800...PS-1 1101	66	66	66	66	Hayley scales; mental development, transfers object hand to hand
67	2801...PS-1 1101	67	67	67	67	Hayley scales; mental development, sustains connection of ring
68	2802...PS-1 1101	68	68	68	68	Hayley scales; mental development, plays with string
69	2803...PS-1 1101	69	69	69	69	Hayley scales; mental development, picks up cube directly and easily
70	2810...PS-1 2101	24	24	24	24	Hayley scales; mental development, pulls string secures ring
71	2815...PS-1 2101	25	25	25	25	Hayley scales; mental development, enjoys sound production
72	2816...PS-1 2101	26	26	26	26	Hayley scales; mental development, lifts cup by handle
73	2817...PS-1 2101	27	27	27	27	Hayley scales; mental development, retaining 2 cubes of 3
74	2818...PS-1 2101	28	28	28	28	Hayley scales; mental development, extends to scribbling
75	2819...PS-1 2101	29	29	29	29	Hayley scales; mental development, looks far dropped object
76	2820...PS-1 2101	30	30	30	30	Hayley scales; mental development, manipulates bell
77	2821...PS-1 2101	31	31	31	31	Hayley scales; mental development, responds to mirror playfully
78		32	32	32	32	Vocalizes 4 different syllables

Form Item Number; Item; Data Items on Pg. 1, C.U.N.H Research Form of Navley Scale of Mental Development

ITEM NO. FORM	DATA ITEM IN	CARD NUM	FROM	TO	DATA ITEM NAME
78	2822...PS-1	2101	31	33	Hayley scales; mental development, pulls string to secure ring
79	2823...PS-1	2101	34	36	Hayley scales; mental development, responds to social play
80	2824...PS-1	2101	35	37	Hayley scales; mental development, attempts to secure 3 cubes
81	2825...PS-1	2101	36	38	Hayley scales; mental development, attempts to pull intuitively
82	2826...PS-1	2101	37	39	Hayley scales; mental development, rings bell intuitively
83	2827...PS-1	2101	38	40	Hayley scales; mental development, responds to name
84	2828...PS-1	2101	40	42	Hayley scales; mental development, says da ah
85	2829...PS-1	2101	40	42	Hayley scales; mental development, uncovers toy
86	2830...PS-1	2101	40	42	Hayley scales; mental development, adjusts toy words
87	2831...PS-1	2101	41	43	Hayley scales; mental development, fingers holes in peg board
	2832...PS-1	2101	42	44	Hayley scales; mental development, puts cube in cup
			43	45	Hayley scales; mental development, looks for contents of box
