2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

INTRODUCTION

The Internal Revenue Service 2014 Public Use Tax File, which contains 178,130 records, was selected as part of the Statistics of Income program that was designed to tabulate and present statistical information for the 149.6 million Form 1040, Form 1040A, and Form 1040EZ Federal Individual Income Tax Returns filed for Tax Year 2014. The Individual Tax File, from which this public use version was derived, is designed for making national level estimates. Subsequently, the 2014 Public Use Tax File is only appropriate for national level estimates. This file is sold in an unidentifiable form, with names, Social Security Numbers (SSN), and other similar information omitted.

The 2014 Public Use Tax File can be purchased through the Internal Revenue Service, Statistics of Income Division. Any questions concerning the cost and acquisition of the current Individual Tax File should be directed to:

DISCLOSURE AVOIDANCE PROCEDURES

To preserve the character of the microdata file while also protecting the identity of individuals, we have made the following changes to the Individual Tax File.

First, fiscal year returns have been converted to reflect the most recent year-end Tax Year and returns filed for years earlier than Tax Year 2011 have been removed from the file.

Second, returns that contain one or more amount fields with values deemed extremely large¹ have been excluded from the microdata sample and are aggregated into one of four records², identified by RECID=999996 for returns reporting negative Adjusted Gross Income (AGI), RECID=999997 for returns reporting positive AGI between \$0 and \$10,000,000, RECID=999998 for returns reporting positive AGI between \$10,000,001 and \$100,000,000, and RECID=999999 for returns reporting positive AGI of \$100,000,001 or more. The rules for identifying extremely large values are not applied to amount fields that are statutorily capped, subject to income limits, or calculated from other fields that are subject to these rules. Information regarding these aggregate returns can be found in the accompanying tabulation entitled “Weighted Counts and Sum of Amounts for Returns Used to Populate Aggregate Records”.

Third, returns that were sampled as a high income no tax return, at a rate of 100 percent, have been placed back in their regular strata based on total income and subsampled at the corresponding strata rate.

Fourth, to make sure the impossibility of knowing whether a given taxpayer is represented in the sample, all remaining returns sampled at rates greater than 10 percent³ have been subsampled at 10 percent.

Fifth, those records sampled at a rate greater than 0.07 percent have been altered in the following manner:

- Alimony paid, alimony received, and State sales tax deduction have been removed.
- Marital status has been modified (see Code Definitions section for specific changes).
- Personal exemption amounts have been modified according to the phase-out limitations and moved to other items.
- Multivariate blurring has been applied to these returns with nonzero values in at least two of the following fields: wages and salaries, state and local income taxes, and real estate taxes. Prior to blurring, these returns are grouped into one of 10 categories based on their filing status and the number of dependents, and then further grouped

¹ Values are considered extremely large if they are, generally, within the highest 30 amounts reported for any income amount value or within the lowest 30 amounts reported for any negative income.

² A total of 1,094 returns were aggregated, representing 1,214 returns in the population.

³See Table A in the Sample Description section of this booklet for the strata subject to subsampling.

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

by the pattern of nonzero values on these three fields plus presence of Schedule C, which is used only for grouping. A multivariate distance statistic is then calculated from the nonzero values of the three variables within each group. Based on this statistic, the two most distant records are identified, and the two additional records closest to each of these two records are located. For each group of three records the average value of each variable is placed in the specific fields. This process is repeated until all records have been averaged or "blurred."

Sixth, all remaining returns, sampled at a 0.07 percent rate, have been altered in the following manner:

- Alimony paid and alimony received have been blurred on a univariate basis nationally.
- Multivariate blurring has been applied to itemized tax returns with nonzero values in at least two of the following fields: wages and salaries, state and local income taxes, and real estate taxes. Blurring of these fields is handled in the same manner as those records sampled at a rate greater than 0.07 percent.
- For nonitemized tax returns, up to 10 percent of random noise, drawn from a uniform distribution, has been added to wages and salaries. The random noise has been constrained as to not disqualify previously qualifying Earned Income Tax Credit recipients or Retirement Saver's Credit recipients.

Seventh, all returns filed with marital status "Surviving Spouse" have been converted to Married Filing Jointly.

Eighth, for all records on the file, the total number of dependents is capped based on filing status. For joint and head of household returns the total number of dependents shown is capped at 3, for single returns the total number of dependents shown is capped at 2, and for married filing separately returns the total number of dependents shown is capped at 1.

Ninth, for all records on the file, all amount fields have been rounded. Amounts, in absolute values, above \$100,000 are rounded to the four most significant digits from left to right(e.g., \$228,867 = \$228,900 and \$1,158,235 = \$1,158,000). Amounts between \$10,000 and \$100,000 are rounded to the nearest \$100. Amounts between \$5 and \$10,000 are rounded to the nearest \$10. Nonzero amounts less than \$5 are set to \$2, with sign retained.

Finally, all records in the file are rebalanced to ensure accounting accuracy after the above disclosure procedures are applied.

Since individual records in this file may or may not contain data from just one tax return--and never contain the full item content of any one tax return--we request that researchers make these facts clear in publishing their findings. In particular, they should refrain from using any language that would imply that they had access to individual taxpayers' records.

¹Counts have been limited depending on filing status. For joint and head of household returns the limit is 3, for single returns the limit is 2 and for married filing separately returns the limit is 1. These limits are applied sequentially by type of dependent, starting with children living at home, then children living away from home, then other dependents, then parents.

²Counts are limited by filing status due to limits on counts of dependents.

EXPLANATION OF FIELDS NOT ABSTRACTED DIRECTLY FROM TAX FORMS

The following explanations define data fields contained in the 2014 Public Use Tax File that have not been abstracted directly from a specific line on Forms 1040, 1040A, 1040EZ, or the accompanying schedules and forms. Field numbers not appearing in this section have been entered on the specific lines on the forms or schedules from which the data were abstracted. Refer to the "2014 Federal Tax Forms" section of this booklet for further information.

<u>Field Number</u>	<u>Definition</u>
P04470	TOTAL DEDUCTIONS This is either the Total Standard Deduction or the Total Itemized Deductions found on Form 1040, line 40. Only one can appear on each return. (Note: If the taxpayer had no income, but still included the total itemized deductions for which she was eligible, this amount is shown in P04470; else the standard deduction for which she was eligible is shown.)
E04600	EXEMPTION AMOUNT This is the amount found on Form 1040, line 42. This amount has been limited based on the caps on exemptions for dependents (see section on Code Definitions for specific changes) and for returns exceeding the adjusted gross income (AGI) phase-out limitations.
E05100	TAX ON TAXABLE INCOME This is the amount shown on Form 1040, line 44 less special taxes from Form 4972 (Tax on Lump Sum Distributions).
E05200	COMPUTED REGULAR TAX This is the amount arrived at by applying the Tax Rate Schedules to Taxable Income, without regard to the type of computation used by the taxpayer.
E06000	INCOME SUBJECT TO TAX For taxpayers filing current year returns, "Income Subject to Tax" is identical to taxable income except for: those dependents paying "kiddie" tax from Form 8615; and those returns with qualified dividends and/or long-term capital gains taxed at or below the 28 percent rate (TXST equals 6 or 7). For dependents filing Form 8615 (TXST = 4 or 8), this is the income taxed at child's rate. For taxpayers with qualified dividends and/or long-term capital gains, this is only the income taxed at the regular rates (not any capital gains that were taxed at the long-term capital gains rates of 0, 10, 15, 20, 25 and 28 percent). For prior year returns and Schedule J returns, "Income Subject to Tax" is computed by using the current Tax Year tax rate schedule to impute a

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

hypothetical taxable income amount necessary to yield the given amount of tax reported.

- E06200 **MARGINAL TAX BASE**
This is the amount of income subject to tax at the marginal tax rate applicable to the return (TXRT), using the 2014 Tax Rate Schedules for all returns. (See Income Subject to Tax).
- E06300 **TAX GENERATED**
This is a computed amount arrived at by applying the Tax Rate Schedules to Income Subject to Tax.
- E07200 **ELDERLY OR DISABLED CREDIT**
Elderly or disabled credit as reported on the 1040 line 54c as part of other credits.
- P08000 **OTHER TAX CREDITS (NOT INCLUDED IN THE OTHER CREDIT FIELDS)**
The sum of the amounts for Other Tax Credits on Form 1040 line 54 for which separate fields have not been listed.
- E07150 **TOTAL TAX CREDITS (SOI)**
Total credits from Form 1040 line 55 plus the portion of refundable credits used to offset tax before credits.
- E06500 **TOTAL INCOME TAX**
Income Tax After Credits (E08800) plus Form 4970 tax less the portion of refundable credits used to offset all other taxes (but never less than zero).
- E08800 **INCOME TAX AFTER CREDITS (SOI)**
Income Tax after Credits from Form 1040 line 56 minus the portion of refundable credits used to offset income tax before credits. For Form 1040EZ, which does not allow for any credits or any other taxes, this is the same as "Total Tax Liability."
- E09700 **RECAPTURE TAXES**
Amount shown in Form 1040 line 66 margin for Recapture of Investment Credits from Form 4255 and recapture of other credits.
- E09800 **SOCIAL SECURITY TAX ON TIP INCOME**
Amount shown in Form 1040 line 58 when Form 4137 box is checked.
- E10300 **TOTAL TAX LIABILITY (SOI)**
Total tax liability (Form 1040, line 63, Form 1040A, line 39, Form 1040-EZ, line 10) minus the portion of refundable credits used to offset income tax before

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

credits minus the portion of refundable credits used to offset all other taxes (but never less than zero).

E59560 **EARNED INCOME FOR EARNED INCOME CREDIT**
The total of earned income (salaries and wages, earned business income, and nontaxable combat pay) used in computing the earned income credit, as shown on the EIC Worksheet (found in the Instructions for Form 1040). Note that this field is computed by SOI. Taxpayers are not required to file this worksheet with their return.

E59680 **EARNED INCOME CREDIT USED TO OFFSET INCOME TAX BEFORE CREDITS**
This amount is the lesser of: Total Earned Income Credit or Income Tax Before Credits (E05800) minus the Making Work Pay Credit (prior year returns).

If Total Earned Income Credit (EIC) is greater than Income Tax Before Credits (reduced by the Making Work Pay Credit), the following fields are computed:

E59700 - **EARNED INCOME CREDIT USED TO OFFSET ALL OTHER TAXES EXCEPT ADVANCE EIC**

The lesser of:

1. Total EIC minus Earned Income Credit used to offset Income Tax Before Credits (E59680); or
2. The sum of all other taxes (E09400 + E09700 + E09800 + E09900), plus the following tax items which are not shown separately: Household employment taxes and all other taxes (margin entries on line 62).

E59720 - **EARNED INCOME CREDIT, REFUNDABLE PORTION**
EIC minus E59680 minus E59700 (see above for definitions and conditions).

E11561 **NET PREMIUM TAX CREDIT USED TO OFFSET INCOME TAX BEFORE CREDITS**
This amount is the lesser of: Total Net Premium Tax Credit or Income Tax Before Credits (E05800) minus Total Earned Income Credit and Making Work Pay Credit (prior year returns).

If Total Net Premium Tax Credit is greater than Income Tax Before Credits (reduced by the Earned Income Credit and Making Work Pay Credit), the following fields are computed:

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

E11562 - NET PREMIUM TAX CREDIT USED TO OFFSET ALL OTHER TAXES

The lesser of:

1. Total Net Premium Tax Credit minus Net Premium Tax Credit used to offset Income Tax Before Credits (E11561); or
2. The sum of all other taxes (E09400 + E09700 + E09800 + E09900), plus the following tax items which are not shown separately: Household employment taxes and all other taxes (margin entries on line 62).

E11563 - NET PREMIUM TAX CREDIT, REFUNDABLE PORTION

Net Premium Tax Credit minus E11561 minus E11562 (see above for definitions and conditions).

E11601 TOTAL REFUNDABLE CREDITS USED TO OFFSET INCOME TAX BEFORE CREDITS

This amount is the summation of the amount of all refundable credits used to offset income tax before credits. The refundable credits applied, and the order, were Making Work Pay Credit (prior year), EIC (E59680), American Opportunity Credit, First Time Homebuyer Credit, Regulated Investment Company Credit, Adoption Credit, Prior Year Minimum Tax Credit, and Health Insurance Tax Credit.

If the total of all refundable credits is greater than Income Tax Before Credits, the following fields are computed:

E11602 - TOTAL REFUNDABLE CREDITS USED TO OFFSET ALL OTHER TAXES

The lesser of:

1. Total amount of refundable credits minus Total refundable credits used to offset income tax before credits (E11601); or
2. The sum of all other taxes (E09400 + E09700 + E09800 + E09900), plus the following tax items which are not shown separately: Household employment taxes and all other taxes (margin entries on line 62).

TECHNICAL DESCRIPTION OF THE FILE

The Public Use file is available in CSV format. This comma separated file contains 178,135 records where the first record consists of only field names. Field names have been ordered first by code fields followed by amount fields in the same order as presented on pages 5 through 10.

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

SAMPLE DESCRIPTION

This section describes the domain of the study, sample design and selection, data capture and cleaning, and the method of estimation.

Domain of Study

The data in this file are estimates from a probability sample of unaudited Individual Income Tax Returns, Forms 1040, 1040A, 1040EZ (including electronic returns) filed by U.S. citizens and residents during Calendar Year 2015.

All returns processed during 2015 were subjected to sampling except tentative and amended returns. Tentative returns were not subjected to sampling because the revised returns may have been sampled later, while amended returns were excluded because the original returns had already been subjected to sampling. A small percentage of returns were not identified as tentative or amended until after sampling. These returns, along with those that contained no income information or frivolous or fraudulent income information when recognized, were excluded in calculating estimates. This file excludes returns older than four years (Tax Year 2010 or less). In addition, the perfection of money amounts during Statistics of Income processing, as well as the blurring techniques used in creation of the Public Use File, may have shifted some returns from one income class to another, making it impossible to replicate Table A exactly from the Public Use sample.

The records found in this file are intended to represent all returns filed for Tax Year 2014. While most returns processed during Calendar Year 2015 were for Tax Year 2014, some were returns for prior years. Returns for prior years were used in place of 2014 returns received and processed after December 31, 2015. This was done in the belief that the characteristics of returns due, but not yet processed, could best be represented by the returns for previous income years that were processed in 2015.

Sample Design and Selection

The sample design is a stratified probability sample, in which the population of tax returns is classified into subpopulations, called strata, and a sample is selected independently from each stratum. Strata are defined by:

1. High combined business and farm total receipts of \$50,000,000 or more.
2. Presence or absence of special Forms or Schedules (Form 2555, Form 1116, Form 1040 Schedule C, and Form 1040 Schedule F).

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

3. Total gross positive or negative income. Sixty variables are used to derive positive and negative incomes. These positive and negative classes are deflated using the Gross Domestic Product Implicit Price Deflator to represent a base year of 1991.
4. Potential usefulness of the return for tax policy modeling. Thirty-two variables are used to determine how useful the return is for tax modeling purposes.

Table A shows the population and sample count for each stratum after collapsing some strata with the same sampling rates. The sampling rates for the Public Use File range from 0.07 percent to 10 percent⁵.

Tax data posting to the IRS Individual Master File at the Martinsburg Computing Center during Calendar Year 2015 were used to assign each taxpayer's record to the appropriate stratum and to determine whether or not the record should be included in the sample. Records are selected for the sample either if they possess certain combinations of the four ending digits of the social security number, or if their ending five digits of an eleven-digit number generated by a mathematical transformation of the SSN is less than or equal to the stratum sampling rate times 100,000.

Data Capture and Cleaning

Data capture for the SOI sample begins with the designation of a sample of administrative records. While the sample was being selected, the process was continually monitored for sample selection and data collection errors. In addition, a small subsample of returns was selected and independently reviewed, analyzed, and processed for a quality evaluation.

The administrative data and controlling information for each record designated for this sample was loaded onto an online database at the Cincinnati Submission Processing Center. Computer data for the selected administrative records were then used to identify inconsistencies, questionable values, and missing values as well as any additional variables that an editor needed to extract for each record. The editors use a hardcopy of the taxpayer's return to enter the required information onto the online system. Data are also adjusted during editing in an attempt to achieve consistent statistical definitions. For example, a taxpayer may report director's fees on the other income line of the Form 1040 return. If this situation was detected during editing, the amount of director's fees was added to the salaries and wages field.

After the completion of service center review, data were further validated, tested, and balanced. Adjustments and imputations for selected fields were used to make each record internally consistent.

⁵ See Bryant, Victoria, John Czajka, Goergia Ivsin, and Jim Nunns. "Design Changes to the SOI Public Use File (PUF)" Proceedings of the 107th Annual Conference on Taxation, 2014, National Tax Association for a more detailed description of the Public Use Tax File sample rates.

2014 STATISTICS OF INCOME PUBLIC USE TAX FILE

In addition, all records in the Public Use Tax File are rebalanced to ensure accounting accuracy after disclosure avoidance procedures are applied.

Some returns designated for the sample were not available for SOI processing because other areas of IRS needed the return at the same time. For Tax Year 2014, 0.02 percent of the sample returns were unavailable.

Method of Estimation

Weights were obtained by dividing the population count of returns in a stratum by the number of sample returns for that stratum. The weights were adjusted to correct for misclassified returns.

[1] This population includes an estimated 951,330 returns that contained no income information or frivolous or fraudulent income information when recognized or represented amended or tentative returns identified after sampling.

[2] This sample count excludes the 4 aggregated records capturing extremely high/low income returns.

[3] Each population member is assigned a degree of interest based on how useful it is for tax modeling purposes. Degree of interest ranges from one (1) to four (4), with a one being assigned to returns that are the least interesting, and a four being assigned to those that are the most interesting. 'All' refers to income classes for which returns with all four degrees of interest are assigned.

[4] Positive and Negative Income classes are divided by a Chain-Type Price Index for the Gross Domestic Product of 1.5403 to represent a base year of 1991.
